

Software Engineer

Technically minded professional with a track record of developing innovative applications, modernizing legacy systems, and delivering scalable software solutions through full-stack development and database optimization.

- Experienced** in designing and enhancing business-critical applications, developing RESTful APIs and backend services, and supporting software delivery across consulting, SaaS, and enterprise environments.
- Proficient** in optimizing SQL queries and data workflows, implementing automated testing frameworks and CI/CD processes, and resolving complex production issues through analytical troubleshooting and stakeholder engagement.
- Recognized** for adapting quickly to new technologies, contributing across frontend, backend, and database layers, and supporting application modernization initiatives, platform migrations, and Agile development efforts.

Areas of Expertise

- Full-Stack Software Development - Enterprise Application Architecture - Performance Tuning & Optimization - Systems Integration & Interoperability - Defect Resolution/Root Cause Analysis	- Test Automation Strategy - Software Quality Assurance - Data Conversion & Migration - Agile & Scrum Methodologies - Secure Software Development	- REST API Design & Integration - Technical Requirements Analysis - Relational Database Management - Continuous Integration & Delivery - Application Modernization Initiatives
--	---	--

Technical Proficiencies

- Programming Languages:** C, C++, C#, Python, Java, Rust
- Frameworks & Technologies:** .NET, ASP.NET, TypeScript, Angular, React, REST APIs
- Database & Reporting Tools:** SQL, SQL Server, SSIS, SSRS
- DevOps & Development Tools:** GitHub Actions, Azure DevOps, Git, CI/CD Pipelines, Bash
- Methodologies & Platforms:** Agile Development, Scrum, Jira, Software Development Lifecycle (SDLC)
- Testing & Quality Assurance:** Playwright, Smoke Testing, Regression Testing, Unit Testing, Test Automation

Professional Experience

CGI Inc. – Birmingham, AL

Software Consultant

June 2022 – Feb 2026

Developed and supported enterprise software solutions for business-critical operations while contributing across application development, database engineering, testing automation, reporting, and data transformation initiatives. Partnered with technical teams and business stakeholders to deliver application enhancements, modernize legacy functionality, troubleshoot production issues, and support platform evolution within fast-paced consulting engagements.

Key Accomplishments & Contributions:

- Reduced** execution time of critical database processes from more than 30 minutes to up to 11 minutes by contributing to stored procedure optimization efforts, eliminating recurring workflow interruptions and timeout failures.
- Delivered** data mapping and transformation logic across seven database tables to support a major client platform migration, helping satisfy contractual milestones and deployment timelines.
- Established** automated smoke and regression testing capabilities using Playwright, expanding validation coverage across core business functions and reducing dependency on manual testing activities.

Contributed to the development and support of SaaS-based applications within an Agile environment, participating in feature delivery, platform configuration, deployment automation, and issue resolution activities. Collaborated with engineering teams to maintain application functionality, support client onboarding initiatives, improve development workflows, and facilitate knowledge sharing across the organization.

Key Accomplishments & Contributions:

- **Resolved** customer-reported application issues by diagnosing defects, implementing code fixes, and supporting production stability across active SaaS environments.
- **Boosted** deployment efficiency by building GitHub Actions workflows that streamlined development/release processes.
- **Improved** onboarding of new engineering resources by providing technical guidance, conducting knowledge-transfer sessions, and supporting pair-programming activities that increased familiarity with development standards.

Lockheed Martin Rotary & Mission Systems – Manassas, VA
College Intern

May 2020 – August 2020

Supported secure software development initiatives within a Linux-based engineering environment, contributing to code quality improvement efforts, analysis automation, and software assurance activities. Developed scripting solutions to streamline technical workflows, facilitate static code analysis, and assist engineering teams in successfully identifying and addressing potential software defects.

Key Accomplishments & Contributions:

- **Expanded** visibility into software quality issues by integrating Coverity static analysis tooling into an existing Linux-based codebase, increasing defect identification capabilities across development efforts.
- **Automated** analysis and reporting activities through the development of Bash and Python scripts, reducing manual effort and improving consistency of security-focused review processes.
- **Strengthened** secure development practices by supporting code assessment initiatives, facilitating earlier detection of vulnerabilities, and contributing to overall software reliability objectives.

Brasfield & Gorrie LLC – Birmingham, AL Aug 2017 – Dec 2017 | May 2018 – Aug 2018 | Jan 2019 – May 2019
Application Development Co-op

Collaborated with development teams to enhance application functionality, improve maintainability, and support business operations through the delivery of scalable software solutions and system enhancements. Supported enterprise application development initiatives by contributing to frontend modernization projects, backend service development, and database integration efforts.

Key Accomplishments & Contributions:

- **Advanced** enterprise modernization objectives by migrating application components from AngularJS to Angular, aimed at improving maintainability and positioning systems for future enhancements.
- **Developed** REST-based services and SQL Server integrations that supported application functionality, data exchange requirements, and business process execution.
- **Expanded** technical expertise across frontend development, backend integration, and database technologies through participation in multiple development initiatives spanning several co-op engagements.

Education

Bachelor of Science (B.S.) in Computer Science

The University of Alabama, Tuscaloosa, Alabama, December 2021
